Chest. Gas Casualty Treatment, Field, Small

SOURCE: Tokyo, Japan.

IMPORTANCE: Not previously reported.

DESCRIPTION: This chest is constructed like a suitcase and is made of fiber with metal stripping along the edges and on the corners. The dimensions are 27" x 13" x 9". The exterior is painted an orange-brown color. A Geneva Red Cross appears on the outside of the chest.

The chest is transported by means of two leather handles. A hasp and lock are used to secure the lid. On the inside of the lid are sewn a cloth pouch and table of contents of the chest.

The interior of the chest is completely lined with white linen. A removable inner chest, containing all the medical items, occupies the entire interior. This inner chest is divided into various sized compartments and is provided with a flat wooden lid held by two spring metal clamps.

An inventory list of the contents is included in this report.

COMMENT: This chest is compactly built and is well stocked. It would have been able to serve its mission in the field had the necessity for gas casualty treatment arisen.

Photograph: Chest with contents displayed.
